LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,

CENSUS OFFICE,

WASHINGTON, D. C., April 10, 1894.

SIR:

I have the honor to transmit herewith the statistical tables, with the necessary descriptive and explanatory matter, of mortality; the insane, feeble-minded, deaf and dumb, and blind; crime, pauperism, and benevolence; education; churches; wealth, debt, and taxation; mineral industries; insurance; foreign born population, and manufactures, forming Part II of the Compendium of the Eleventh Census of the United States. This work has been prepared under the acts of March 1, 1889, and March 3, 1891.

Very respectfully, your obedient servant,

CARROLL D. WRIGHT,

Commissioner of Labor in charge.

Hon. Hoke Smith, Secretary of the Interior.

V

VITAL AND SOCIAL STATISTICS.

372 pt. 2——1

1

MORTALITY STATISTICS.

The total number of deaths reported as having occurred in the United States during the census year is 875,521, giving a death rate of 13.98 to the thousand of living population. This death rate is lower than that given in the census of 1880, viz, 15.09, and higher than that given in the census of 1870, viz, 12.77. This does not indicate any actual change in the death rate, but rather that the enumerators' returns of the Eleventh Census are more deficient as regards the deaths than was the case in 1880.

Excluding the states of Alabama, Connecticut, Delaware, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, Vermont, the District of Columbia, and the cities known as "registration cities," the number of deaths actually reported by the enumerators was 408,178. To these returns of deaths furnished by the enumerators there were added from registers furnished by physicians throughout the country 39,805 additional cases, making the total deaths recorded from other than registration sources 447,983.

For the states and cities referred to above, the state and municipal registration records of deaths were copied and used in the tabulations, and as these records are based upon a regular system of registration and on burial permits, they are probably nearly accurate, and aggregate 427,538 deaths.

The aggregate population of the states and cities covered by the registration record is 21,093,320, and that covered by the nonregistration record, or the enumerators' returns, is 41,528,930. If we were to accept the enumerators' figures the comparative death rates per 1,000 of living population would be shown by the following statement:

CHARACTER OF RETURNS.	Population.	Deaths.	Death rate.
Registration record		427, 538 447, 983	20. 27 10. 79

The death rate for the localities covered by the registration record, viz, 20.27 per 1,000 of living population, is lower than the figures for the same record in 1880, viz, 22.21. The present record covers a much more extensive area than did that of 1880, and while the returns from the larger cities and some of the registration states are no doubt nearly correct, it is probable that there are omissions in the returns for those localities in which the registration system has been recently established. On the other hand the proportion of rural localities, in which the death rate is always lower than in cities, is greater in the registration record of 1890 than it was in 1880, which will account for a part of the apparent lowering of the death rate.

Upon a complete compilation of both enumerators' and registration returns for the states of Massachusetts and New Jersey in 1880 it was estimated that the enumerators' returns for the whole country were then deficient about 30 per cent, making which allowance the true mortality for the whole country was estimated to be about 18.00 per 1,000 of living population.

The actual death rate for the nonregistration area in 1880, as based upon the enumerators' returns, was 13.42 per 1,000 of population, while the same class of returns now give a rate of but 10.79 per 1,000; hence there must either have been a great increase in the healthfulness of the country or the enumerators' returns must be more incomplete as regards deaths than they were in 1880.

Taking the registration states together, and contrasting the mortality in the rural and urban populations, we find the following results:

AREAS.	Population.	Deaths.	Death rate.
Cities	7, 254, 534	171, 049	23, 58
	6, 139, 813	92, 012	14, 99

These figures, as stated above, are a little too low, the deficiency being chiefly in the rural populations, where the actual death rate was probably about 15.5 per 1,000.

The actual death rate for the whole country in 1890 was probably about the same that it was in 1880, being about 18 per 1,000. The amount of deficiency in the enumerators' returns of deaths in the nonregistration states evidently varies greatly in the different states, and comparisons of death rates for these states based on census figures would be greatly misleading, therefore such death rates have not been calculated. The value of the returns from nonregistration localities consists in the fact that they indicate the relative prevalence of certain fatal forms of diseases in different regions, at different ages, and in different seasons, not so accurately, it is true, as do the figures derived from registration records, which can be used to calculate true death rates, but still sufficient to give some interesting information, which at present can be obtained from no other source.

The most interesting of the mortality statistics of the Eleventh Census are those derived from the registration states for the census year, and those derived from the registration records of New Jersey, Baltimore, Boston, Brooklyn, New York city, Philadelphia, District of Columbia, and the counties in the immediate vicinity of New York city forming what is called the suburban district, for the 5 years ended June 1, 1889, and for Chicago, Cincinnati, and St. Louis, for shorter periods, ended on the same date.

Taking the sum of the registration states for the census year we have an aggregate population of 13,394,347, of which 7,254,534 resided in cities of 5,000 population and upward, and 6,139,813 in the smaller towns and rural districts; 12,442,940 were white and 951,407 were colored. Of the whites a little over 6,000,000 were native born of native born parents, about 3,250,000 were native born of parents one or both of whom were foreign born, and about 3,000,000 were foreign born. It will be seen that these numbers are large enough to make the results fairly reliable.

The average death rate for the whole of these states was 19.64 per 1,000, being for males 20.68 and for females 18.62. In the cities the average death rate was 23.58, and in the rural districts 14.99. The death rate of the native born whites of native born parents was 17.00, of the native born whites having one or both parents foreign born was 24.42; of the foreign born whites was 19.85; and of the colored was 19.57.

The cause of the relatively high death rate among the native born whites of foreign born parents is the comparatively great proportion of children in this class, as will be seen in the final report.

The average death rate of the colored (19.57) is a trifle less than that of the whites (19.65), but in the cities the death rate of the colored is 34.52, while that of the whites is 23.22. In Alabama, which is reckoned as a registration state, although the registration

of deaths is not complete in the rural districts, the death rate of the whites is reported as 12.36 and of the colored 15.59, the true death rates being probably about 16 for the whites and about 19 for the colored.

The following table shows the death rates for some of the principal cities during the census year, with distinction of white and colored:

CITIES.	White.	Colored.	OITIES.	White.	Colored.
New York	28, 47	37.46	Rochester	17. 39	6, 02
Chicago	21.03	23, 30	Providence	21.97	34, 81
Philadelphia		32, 43	Indianapolis	17. 78	30, 04
Brooklyn	25, 41	34.99	Allegheny	20,06	24, 13
St. Louis	18, 15	34, 65	Albany	25.34	39, 44
Boston	24, 62	33, 29	Syracuse	19, 74	11, 53
Baltimore	22, 61	36. 41	Worcester	19, 14	15, 37
San Francisco	23, 57	24.00	Richmond	22.25	40, 80
Cincinnati	21, 93	33, 04	New Haven	20.90	29, 17
Cleveland	21.83	31.63	Paterson	23, 62	35, 56
Buffalo		34, 22	Lowell	27, 42	
New Orleans	25, 41	36, 61	Nashville	14, 39	23, 92
Pittsburg	21, 56	29, 16	A tlanta	18, 28	38, 57
Washington	1	38, 22	Memphis	29.37	29, 97
Detroit	1	23, 45	Charleston	24, 75	53, 94
Newark	1	44. 48	Savannah	20, 04	41.47
Jersey city	1	29, 50	Galveston	24, 37	25, 28
Louisville		31.98	Mobile	26, 05	43, 75

For the 5-year records above referred to we have 171,324 as the average annual number of deaths for an aggregate mean population of 7,220,435; giving an average annual death rate of 23.73 per 1,000. It is to be borne in mind that nearly all of this population is in large cities. It includes, however, about 600,000 of rural population in New Jersey, in which the death rate during the census year was 16.06 per 1,000. In the suburban district around New York city the death rate was 19.12 per 1,000. The average annual death rate during the 5 years ended June 1, 1890, was, for Baltimore (first 20 wards only), 24.01; Boston, 23.49; Brooklyn, 25.53; New York city, 29.59; Philadelphia, 22.86; District of Columbia, 25.25; the state of New Jersey, 20.08.

AGE.

Of the 875,521 deaths reported, including those of unknown ages, 197,167 occurred under 1 year of age and 307,562 under 5 years of age. Making a distinction in these deaths according to color, we find that 758,660 deaths occurred among the white population, of which 172,059 were under 1 year of age and 264,793 were under 5 years of age, while 116,861 occurred among the colored population, of which 25,108 were under 1 year of age and 42,769 were under 5 years of age.

These figures show the death rates under 1 year and under 5 years in each 1,000 deaths of all ages to be as follows:

RACE.	Under 1.	Under 5.
White	226, 79 214, 85	349, 03 305, 98

In further analysis of the figures, according to the source from which the data was secured, we find that of the 875,521 total deaths 427,538 were reported from registration sources, of which 387,386 were white and 40,152 were colored, the numbers

at each age being: white, under 1 year, 102,609; under 5 years, 147,277; colored, under 1 year, 11,048; under 5 years, 16,259. Of the 447,983 cases of death reported from nonregistration sources, 371,274 were white and 76,709 were colored, the age details being: white, under 1 year, 69,450; under 5 years, 117,516; colored, under 1 year, 14,060; under 5 years, 26,510.

A comparison of the death rates under 1 year and under 5 years, based upon the number of deaths reported from each of the sources mentioned, gives the following results per 1,000 deaths of all ages:

CHARACTER OF RETURNS.	WH	ITE.	COLORED.		
CHANGELLA OF MATERIAL	Under 1.	Under 5.	Under 1.	Under 5.	
Registration		380, 18 316, 52	275. 15 183. 29	404, 94 345, 59	

The comparative death rates per 1,000 of living population of corresponding ages for both white and colored in the registration states as a whole, in the cities, and in the rural portions, are shown by the following statement:

SUM OF REGISTRATION STATES.

		WHITE.		COLORED.			
ITEMS.	Total.	Under 1.	Under 5.	Total.	Under 1.	Under 5.	
Population	12, 442, 940	261, 247	1, 256, 504	951, 407	24, 090	122, 114

	81,258	13, 423	20,337	10,754	2, 273	3, 841	
Deaths	04,200						

DIPHTHERIA.

The total number of deaths reported as due to diphtheria is 27,815, giving a proportion of 33.06 per 1,000 of all deaths in which the causes are reported, which is decidedly lower than the figures for 1880, which gave a proportion of 52.32 per 1,000. To these figures, however, should be added the greater part of the deaths caused by croup, numbering 13,862, which would make the combined ratio of the two diseases 49.54 per 1,000. In the cities of the registration states the proportion of deaths from diphtheria alone was 37.70, and in the rural districts 22.63, while in the nonregistration states, exclusive of the registration cities, the proportion was 33.19. For diphtheria and croup taken together the ratios were, in the registration states, for the cities, 51.63, and for the rural districts, 33.99; while in the nonregistration states, excluding the registration cities, the proportion was 52.38,

South Carolina, 23.95; San Francisco, California, 23.71; Cincinnati, Ohio, 22.99; Rochester, New York, 22.90; Richmond, Virginia, 21.75; Memphis, Tennessee, 21.63; Kansas city, Missouri, 21.54; Davenport, Iowa, 20.04; Baltimore, Maryland, 18.83; Providence, Rhode Island, 18.08; St. Louis, Missouri, 16.81; Savannah, Georgia, 15.95; Galveston, Texas, 15.83; Buffalo, New York, 15.81; Milwaukee, Wisconsin, 15.56; Boston, Massachusetts, 15.72; Detroit, Michigan, 9.58; Brooklyn, New York, 9.43; Jackson, Mississippi, 9.39; Trenton, New Jersey, 8.70; New York city, 8.03; New Orleans, Louisiana, 6.55.

Typhoid fever appears to have caused relatively more deaths in the rural districts than in the cities, and more deaths in the northern than in the southern states. In the 5-year records typhoid fever is reported as having caused 16.76 out of each 1,000 deaths, the highest proportion being in Philadelphia, where it was 29.74.

In the registration states the average death rate per 1,000 of population, due to typhoid fever, was 0.38.

MALARIAL FEVER.

The total number of deaths reported as due to malarial fever was 18,594, giving a proportion of 22.10 per 1,000 of all deaths from reported causes, which is considerably lower than the same ratio in 1880, when it was 27.61. In the registration states it produced in the cities 7.53 and in the rural districts 16.93 per 1,000 of all deaths from known causes, while in the nonregistration states, exclusive of the registration cities, the proportion was 33.03 per 1,000. In Alabama the rate was 55.02; in the District of Columbia, 16.49; in Connecticut, 13.30; in Delaware, 9.35; in New Jersey, 9.08; in Rhode Island, 7.95; in New York, 7.79; in New Hampshire, 2.91; in Vermont, 2.66, and in Massachusetts, 2.58.

In the registration states the average death rate per 1,000 of population, due to malarial fever, was 0.21.

CONSUMPTION.

The total number of deaths reported as due to consumption was 102,199, giving a proportion of 121.49 per 1,000 of all deaths having reported causes, which is a trifle smaller proportion than that of 1880, namely, 124.75. In the cities of the registration states it caused 125.75 and in the rural districts 117.03 per 1,000 of all deaths; and in the nonregistration states exclusive of the registration cities the ratio was 123.88 per 1,000. The following are the corresponding figures for some of the registration states and cities:

District of Columbia, 139.16; Delaware, 158.98; Massachusetts, 134.28; Rhode Island, 124.17; Alabama, 115.55; Vermont, 125.76; New York, 121.44; Connecticut, 121.36; New Jersey, 112.33; New Hampshire, 106.24; Keokuk, Iowa, 205.74; Jackson, Mississippi, 183.10; Norwich, Connecticut, 174.26; Lynn, Massachusetts, 171.78; Nashville, Tennessee, 162.58; San Francisco, California, 161.55; San Antonio, Texas, 161.33; Memphis, Tennessee, 159.24; Chattanooga, Tennessee, 156.74; Indianapolis, Indiana, 152.94; Boston, Massachusetts, 152.21; Savannah, Georgia, 151.56; Atlanta, Georgia, 141.41, Charleston, South Carolina, 144.12; Wilmington, Delaware, 136.94; Galveston, Texas, 139.57; Providence, Rhode Island, 136.81; New York city, 135.39; Louisville, Kentucky, 129.47; Mobile, Alabama, 128.50; Cincinnati, Ohio, 126.66; Albany, New York, 125.88; Philadelphia, Pennsylvania, 123.85; Rochester, New York, 123.60; Fort Smith, Arkansas, 123.08; Troy, New York, 122.17; New Orleans, Louisiana, 121.04; Baltimore, Maryland, 118.69; Richmond, Virginia, 113.96; Newark, New Jersey, 113.16; Brooklyn, New York, 113.01; Camden, New Jersey, 107.59; Minneapolis, Minnesota, 103.45; Denver, Colorado, 100.27; Kansas city, Missouri,

96.75; St. Louis, Missouri, 96.71; Milwaukee, Wisconsin, 95.92; Buffalo, New York, 94.05; Concord, New Hampshire, 89.02; Chicago, Illinois, 83.78; Detroit, Michigan, 80.00; St. Paul, Minnesota, 74.89; Omaha, Nebraska, 73.50; Davenport, Iowa, 73.50; Cleveland, Ohio, 72.57.

In the 5-year records of the large cities consumption caused 127.40 out of each 1,000 deaths, the highest proportion being in Boston, where it was 164.88.

In the registration states the average death rate per 1,000 of population, due to consumption, was 2.37.

TABULAR MATTER.

In Table 1 the figures representing deaths in the registration and nonregistration localities have been brought together for purposes of comparison. They are given for each of the registration states, both inclusive and exclusive of cities, and also for each city or town in the United States of 5,000 inhabitants and upward in which the data was secured from registration records.

In this table the distinction of sex is made, and the number of deaths at 5 years and upward is also stated for each locality, with distinction of color, these figures not appearing in the more extended table following.

In Table 2 the figures are summarized for each state, and in Table 3 are given for each group, county, city, or town which was separately tabulated.

The states have been divided into groups upon the same lines followed at the Tenth Census, and as the counties comprising each state group follow the group total in alphabetical order, no further description of the group is necessary.

TABLE 1.—DEATHS IN THE UNITED STATES IN EACH REGISTRATION STATE AND CITY,

372 pt. 2——3

For some of the states and cities the proportion of deaths from diphtheria per 1,000 of all deaths of known causes was as follows:

Vermont, 42.62; Connecticut, 39.97; Massachusetts, 38.66; New Jersey, 35.38; New Hampshire, 33.52; New York, 33.40; Delaware, 27.72; Rhode Island, 27.37; District of Columbia, 24.40; Alabama, 4.27; Denver, Colorado, 56.57; Dover, New Hampshire, 137.55; Lawrence, Massachusetts, 121.00; Toledo, Ohio, 107.73; Hartford, Connecticut, 65.97; Minneapolis, Minnesota, 63.22; Cincinnati, Ohio, 61.35; Pittsburg, Pennsylvania, 60.50; Elmira, New York, 96.36; Detroit, Michigan, 56.53; Jersey city, New Jersey, 55.03; New Haven, Connecticut, 50.12; Brooklyn, New York, 49.58; Boston, Massachusetts, 49.05; Chicago, Illinois, 48.67; Newark, New Jersey, 48.39; Bridgeport, Connecticut, 47.95; Allegheny, Pennsylvania, 46.23; St. Paul, Minnesota, 42.15; Albany, New York, 41.41; Providence, Rhode Island, 34.12; New York city, 30.83; Indianapolis, Indiana, 30.18; St. Louis, Missouri, 25.86; Troy, New York, 24.43; Burlington, Vermont, 22.90; Trenton, New Jersey, 22.22; Philadelphia, Pennsylvania, 20.35; Kansas city, Missouri, 17.48; Louisville, Kentucky, 17.43; New Orleans, Louisiana, 16.73; Memphis, Tennessee, 14.42; San Francisco, California, 14.00; Baltimore, Maryland, 10.54; Richmond, Virginia, 10.00; Rochester, New York, 9.51; San Antonio, Texas, 6.63; Wilmington, Delaware, 6.37; Concord, New Hampshire, 5.93; Chattanooga, Tennessee, 5.18; Galveston, Texas, 4.32; Mobile, Alabama, 3.86; Atlanta, Georgia, 3.80; Savannah, Georgia, 3.63; Nashville, Tennessee, 2.97; Charleston, South Carolina, 0.44.

As in 1880, therefore, diphtheria is much more prevalent in the northern part of the country than in the south, but its relative prevalence in the cities appears to have greatly increased since the last census, at which time it was slightly more prevalent in the rural districts than in the cities, whereas in 1890 the reverse appears to have been the case.

In the 5-year records of the large cities diphtheria caused 37.57 out of each 1,000 deaths from known causes, the highest proportion being in St. Louis (70.70), and next to this in Chicago (65.12).

In the registration states the average death rate per 1,000 of population, due to diphtheria, was 0.63.

TYPHOID FEVER.

The total number of deaths from enteric (typhoid) fever reported is 27,058, being in proportion of 32.16 per 1,000 of all deaths from reported causes. In the registration states the proportion is 19.90, being 17.02 in the cities and 25.43 in the rural districts. In the nonregistration states, excluding the registration cities, the proportion is 40.85. These are slightly in excess of the proportion shown in the last census.

The following are the proportions of deaths from this disease per 1,000 of all deaths from known causes in some states and cities during the census year:

Alabama, 46.69; Delaware, 34.07; District of Columbia, 33.65; Vermont, 23.59; Connecticut, 23.05; New Jersey, 22.68; New Hampshire, 20.26; Rhode Island, 20.22; Massachusetts, 18.57; New York, 14.02; Allegheny, Pennsylvania, 90.57; Denver, Colorado, 90.52; Danbury, Connecticut, 79.88; Pittsburg, Pennsylvania, 58.57; Camden, New Jersey, 54.15; Omaha, Nebraska, 48.88; Lawrence, Massachusetts, 42.15; St. Paul, Minnesota, 41.26; Chattanooga, Tennessee, 38.86; Minneapolis, Minnesota, 38.59; Nashville, Tennessee, 36.38; Louisville, Kentucky, 34.87; Newark, New Jersey, 34.48; Chicago, Illinois, 34.38; San Antonio, Texas, 33.15; Philadelphia, Pennsylvania, 32.58; Jersey city, New Jersey, 30.10; Atlanta, Georgia, 29.80; Indianapolis, Indiana, 29.16; Cleveland, Ohio, 28.68; Albany, New York, 27.74; Troy, New York, 25.66; Charleston,

VITAL AND SOCIAL STATISTICS.

372 pt. 2——1

1

MORTALITY STATISTICS.

The total number of deaths reported as having occurred in the United States during the census year is 875,521, giving a death rate of 13.98 to the thousand of living population. This death rate is lower than that given in the census of 1880, viz, 15.09, and higher than that given in the census of 1870, viz, 12.77. This does not indicate any actual change in the death rate, but rather that the enumerators' returns of the Eleventh Census are more deficient as regards the deaths than was the case in 1880.

Excluding the states of Alabama, Connecticut, Delaware, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, Vermont, the District of Columbia, and the cities known as "registration cities," the number of deaths actually reported by the enumerators was 408,178. To these returns of deaths furnished by the enumerators there were added from registers furnished by physicians throughout the country 39,805 additional cases, making the total deaths recorded from other than registration sources 447,983.

For the states and cities referred to above, the state and municipal registration records of deaths were copied and used in the tabulations, and as these records are based upon a regular system of registration and on burial permits, they are probably nearly accurate, and aggregate 427,538 deaths.

The aggregate population of the states and cities covered by the registration record is 21,093,320, and that covered by the nonregistration record, or the enumerators' returns, is 41,528,930. If we were to accept the enumerators' figures the comparative death rates per 1,000 of living population would be shown by the following statement:

CHARACTER OF RETURNS.	Population.	Deaths.	Death rate.
Registration record		427, 538 447, 983	20. 27 10. 79

The death rate for the localities covered by the registration record, viz, 20.27 per 1,000 of living population, is lower than the figures for the same record in 1880, viz, 22.21. The present record covers a much more extensive area than did that of 1880, and while the returns from the larger cities and some of the registration states are no doubt nearly correct, it is probable that there are omissions in the returns for those localities in which the registration system has been recently established. On the other hand the proportion of rural localities, in which the death rate is always lower than in cities, is greater in the registration record of 1890 than it was in 1880, which will account for a part of the apparent lowering of the death rate.

Upon a complete compilation of both enumerators' and registration returns for the states of Massachusetts and New Jersey in 1880 it was estimated that the enumerators' returns for the whole country were then deficient about 30 per cent, making which allowance the true mortality for the whole country was estimated to be about 18.00 per 1,000 of living population.

The actual death rate for the nonregistration area in 1880, as based upon the enumerators' returns, was 13.42 per 1,000 of population, while the same class of returns now give a rate of but 10.79 per 1,000; hence there must either have been a great increase in the healthfulness of the country or the enumerators' returns must be more incomplete as regards deaths than they were in 1880.

Taking the registration states together, and contrasting the mortality in the rural and urban populations, we find the following results:

AREAS.	Population.	Deaths.	Death rate.
Cities	7, 254, 534	171, 049	23, 58
	6, 139, 813	92, 012	14, 99

These figures, as stated above, are a little too low, the deficiency being chiefly in the rural populations, where the actual death rate was probably about 15.5 per 1,000.

The actual death rate for the whole country in 1890 was probably about the same that it was in 1880, being about 18 per 1,000. The amount of deficiency in the enumerators' returns of deaths in the nonregistration states evidently varies greatly in the different states, and comparisons of death rates for these states based on census figures would be greatly misleading, therefore such death rates have not been calculated. The value of the returns from nonregistration localities consists in the fact that they indicate the relative prevalence of certain fatal forms of diseases in different regions, at different ages, and in different seasons, not so accurately, it is true, as do the figures derived from registration records, which can be used to calculate true death rates, but still sufficient to give some interesting information, which at present can be obtained from no other source.

The most interesting of the mortality statistics of the Eleventh Census are those derived from the registration states for the census year, and those derived from the registration records of New Jersey, Baltimore, Boston, Brooklyn, New York city, Philadelphia, District of Columbia, and the counties in the immediate vicinity of New York city forming what is called the suburban district, for the 5 years ended June 1, 1889, and for Chicago, Cincinnati, and St. Louis, for shorter periods, ended on the same date.

Taking the sum of the registration states for the census year we have an aggregate population of 13,394,347, of which 7,254,534 resided in cities of 5,000 population and upward, and 6,139,813 in the smaller towns and rural districts; 12,442,940 were white and 951,407 were colored. Of the whites a little over 6,000,000 were native born of native born parents, about 3,250,000 were native born of parents one or both of whom were foreign born, and about 3,000,000 were foreign born. It will be seen that these numbers are large enough to make the results fairly reliable.

The average death rate for the whole of these states was 19.64 per 1,000, being for males 20.68 and for females 18.62. In the cities the average death rate was 23.58, and in the rural districts 14.99. The death rate of the native born whites of native born parents was 17.00, of the native born whites having one or both parents foreign born was 24.42; of the foreign born whites was 19.85; and of the colored was 19.57.

The cause of the relatively high death rate among the native born whites of foreign born parents is the comparatively great proportion of children in this class, as will be seen in the final report.

The average death rate of the colored (19.57) is a trifle less than that of the whites (19.65), but in the cities the death rate of the colored is 34.52, while that of the whites is 23.22. In Alabama, which is reckoned as a registration state, although the registration

of deaths is not complete in the rural districts, the death rate of the whites is reported as 12.36 and of the colored 15.59, the true death rates being probably about 16 for the whites and about 19 for the colored.

The following table shows the death rates for some of the principal cities during the census year, with distinction of white and colored:

CITIES.	White.	Colored.	OITIES.	White.	Colored.
New York	28, 47	37.46	Rochester	17. 39	6, 02
Chicago	21.03	23, 30	Providence	21.97	34, 81
Philadelphia		32, 43	Indianapolis	17. 78	30, 04
Brooklyn	25, 41	34.99	Allegheny	20,06	24, 13
St. Louis	18, 15	34, 65	Albany	25.34	39, 44
Boston	24, 62	33, 29	Syracuse	19, 74	11, 53
Baltimore	22, 61	36. 41	Worcester	19, 14	15, 37
San Francisco	23, 57	24.00	Richmond	22.25	40, 80
Cincinnati	21, 93	33, 04	New Haven	20.90	29, 17
Cleveland	21.83	31.63	Paterson	23, 62	35, 56
Buffalo		34, 22	Lowell	27, 42	
New Orleans	25, 41	36, 61	Nashville	14, 39	23, 92
Pittsburg	21, 56	29, 16	A tlanta	18, 28	38, 57
Washington	1	38, 22	Memphis	29.37	29, 97
Detroit	1	23, 45	Charleston	24, 75	53, 94
Newark	1	44. 48	Savannah	20, 04	41.47
Jersey city	1	29, 50	Galveston	24, 37	25, 28
Louisville		31.98	Mobile	26, 05	43, 75

For the 5-year records above referred to we have 171,324 as the average annual number of deaths for an aggregate mean population of 7,220,435; giving an average annual death rate of 23.73 per 1,000. It is to be borne in mind that nearly all of this population is in large cities. It includes, however, about 600,000 of rural population in New Jersey, in which the death rate during the census year was 16.06 per 1,000. In the suburban district around New York city the death rate was 19.12 per 1,000. The average annual death rate during the 5 years ended June 1, 1890, was, for Baltimore (first 20 wards only), 24.01; Boston, 23.49; Brooklyn, 25.53; New York city, 29.59; Philadelphia, 22.86; District of Columbia, 25.25; the state of New Jersey, 20.08.

AGE.

Of the 875,521 deaths reported, including those of unknown ages, 197,167 occurred under 1 year of age and 307,562 under 5 years of age. Making a distinction in these deaths according to color, we find that 758,660 deaths occurred among the white population, of which 172,059 were under 1 year of age and 264,793 were under 5 years of age, while 116,861 occurred among the colored population, of which 25,108 were under 1 year of age and 42,769 were under 5 years of age.

These figures show the death rates under 1 year and under 5 years in each 1,000 deaths of all ages to be as follows:

RACE.	Under 1.	Under 5.
White	226, 79 214, 85	349, 03 305, 98

In further analysis of the figures, according to the source from which the data was secured, we find that of the 875,521 total deaths 427,538 were reported from registration sources, of which 387,386 were white and 40,152 were colored, the numbers

at each age being: white, under 1 year, 102,609; under 5 years, 147,277; colored, under 1 year, 11,048; under 5 years, 16,259. Of the 447,983 cases of death reported from nonregistration sources, 371,274 were white and 76,709 were colored, the age details being: white, under 1 year, 69,450; under 5 years, 117,516; colored, under 1 year, 14,060; under 5 years, 26,510.

A comparison of the death rates under 1 year and under 5 years, based upon the number of deaths reported from each of the sources mentioned, gives the following results per 1,000 deaths of all ages:

CHARACTER OF RETURNS.	WH	ITE.	COLORED.		
CHANGELLA OF MATERIAL	Under 1.	Under 5.	Under 1.	Under 5.	
Registration		380, 18 316, 52	275. 15 183. 29	404, 94 345, 59	

The comparative death rates per 1,000 of living population of corresponding ages for both white and colored in the registration states as a whole, in the cities, and in the rural portions, are shown by the following statement:

SUM OF REGISTRATION STATES.

		WHITE.		colored.				
ITEMS.	Total.	Under 1.	Under 5.	Total.	Under 1.	Under 5.

Deaths	04,200							

DIPHTHERIA.

The total number of deaths reported as due to diphtheria is 27,815, giving a proportion of 33.06 per 1,000 of all deaths in which the causes are reported, which is decidedly lower than the figures for 1880, which gave a proportion of 52.32 per 1,000. To these figures, however, should be added the greater part of the deaths caused by croup, numbering 13,862, which would make the combined ratio of the two diseases 49.54 per 1,000. In the cities of the registration states the proportion of deaths from diphtheria alone was 37.70, and in the rural districts 22.63, while in the nonregistration states, exclusive of the registration cities, the proportion was 33.19. For diphtheria and croup taken together the ratios were, in the registration states, for the cities, 51.63, and for the rural districts, 33.99; while in the nonregistration states, excluding the registration cities, the proportion was 52.38,

South Carolina, 23.95; San Francisco, California, 23.71; Cincinnati, Ohio, 22.99; Rochester, New York, 22.90; Richmond, Virginia, 21.75; Memphis, Tennessee, 21.63; Kansas city, Missouri, 21.54; Davenport, Iowa, 20.04; Baltimore, Maryland, 18.83; Providence, Rhode Island, 18.08; St. Louis, Missouri, 16.81; Savannah, Georgia, 15.95; Galveston, Texas, 15.83; Buffalo, New York, 15.81; Milwaukee, Wisconsin, 15.56; Boston, Massachusetts, 15.72; Detroit, Michigan, 9.58; Brooklyn, New York, 9.43; Jackson, Mississippi, 9.39; Trenton, New Jersey, 8.70; New York city, 8.03; New Orleans, Louisiana, 6.55.

Typhoid fever appears to have caused relatively more deaths in the rural districts than in the cities, and more deaths in the northern than in the southern states. In the 5-year records typhoid fever is reported as having caused 16.76 out of each 1,000 deaths, the highest proportion being in Philadelphia, where it was 29.74.

In the registration states the average death rate per 1,000 of population, due to typhoid fever, was 0.38.

MALARIAL FEVER.

The total number of deaths reported as due to malarial fever was 18,594, giving a proportion of 22.10 per 1,000 of all deaths from reported causes, which is considerably lower than the same ratio in 1880, when it was 27.61. In the registration states it produced in the cities 7.53 and in the rural districts 16.93 per 1,000 of all deaths from known causes, while in the nonregistration states, exclusive of the registration cities, the proportion was 33.03 per 1,000. In Alabama the rate was 55.02; in the District of Columbia, 16.49; in Connecticut, 13.30; in Delaware, 9.35; in New Jersey, 9.08; in Rhode Island, 7.95; in New York, 7.79; in New Hampshire, 2.91; in Vermont, 2.66, and in Massachusetts, 2.58.

In the registration states the average death rate per 1,000 of population, due to malarial fever, was 0.21.

CONSUMPTION.

The total number of deaths reported as due to consumption was 102,199, giving a proportion of 121.49 per 1,000 of all deaths having reported causes, which is a trifle smaller proportion than that of 1880, namely, 124.75. In the cities of the registration states it caused 125.75 and in the rural districts 117.03 per 1,000 of all deaths; and in the nonregistration states exclusive of the registration cities the ratio was 123.88 per 1,000. The following are the corresponding figures for some of the registration states and cities:

District of Columbia, 139.16; Delaware, 158.98; Massachusetts, 134.28; Rhode Island, 124.17; Alabama, 115.55; Vermont, 125.76; New York, 121.44; Connecticut, 121.36; New Jersey, 112.33; New Hampshire, 106.24; Keokuk, Iowa, 205.74; Jackson, Mississippi, 183.10; Norwich, Connecticut, 174.26; Lynn, Massachusetts, 171.78; Nashville, Tennessee, 162.58; San Francisco, California, 161.55; San Antonio, Texas, 161.33; Memphis, Tennessee, 159.24; Chattanooga, Tennessee, 156.74; Indianapolis, Indiana, 152.94; Boston, Massachusetts, 152.21; Savannah, Georgia, 151.56; Atlanta, Georgia, 141.41, Charleston, South Carolina, 144.12; Wilmington, Delaware, 136.94; Galveston, Texas, 139.57; Providence, Rhode Island, 136.81; New York city, 135.39; Louisville, Kentucky, 129.47; Mobile, Alabama, 128.50; Cincinnati, Ohio, 126.66; Albany, New York, 125.88; Philadelphia, Pennsylvania, 123.85; Rochester, New York, 123.60; Fort Smith, Arkansas, 123.08; Troy, New York, 122.17; New Orleans, Louisiana, 121.04; Baltimore, Maryland, 118.69; Richmond, Virginia, 113.96; Newark, New Jersey, 113.16; Brooklyn, New York, 113.01; Camden, New Jersey, 107.59; Minneapolis, Minnesota, 103.45; Denver, Colorado, 100.27; Kansas city, Missouri,

96.75; St. Louis, Missouri, 96.71; Milwaukee, Wisconsin, 95.92; Buffalo, New York, 94.05; Concord, New Hampshire, 89.02; Chicago, Illinois, 83.78; Detroit, Michigan, 80.00; St. Paul, Minnesota, 74.89; Omaha, Nebraska, 73.50; Davenport, Iowa, 73.50; Cleveland, Ohio, 72.57.

In the 5-year records of the large cities consumption caused 127.40 out of each 1,000 deaths, the highest proportion being in Boston, where it was 164.88.

In the registration states the average death rate per 1,000 of population, due to consumption, was 2.37.

TABULAR MATTER.

In Table 1 the figures representing deaths in the registration and nonregistration localities have been brought together for purposes of comparison. They are given for each of the registration states, both inclusive and exclusive of cities, and also for each city or town in the United States of 5,000 inhabitants and upward in which the data was secured from registration records.

In this table the distinction of sex is made, and the number of deaths at 5 years and upward is also stated for each locality, with distinction of color, these figures not appearing in the more extended table following.

In Table 2 the figures are summarized for each state, and in Table 3 are given for each group, county, city, or town which was separately tabulated.

The states have been divided into groups upon the same lines followed at the Tenth Census, and as the counties comprising each state group follow the group total in alphabetical order, no further description of the group is necessary.

372 pt. 2——3

For some of the states and cities the proportion of deaths from diphtheria per 1,000 of all deaths of known causes was as follows:

Vermont, 42.62; Connecticut, 39.97; Massachusetts, 38.66; New Jersey, 35.38; New Hampshire, 33.52; New York, 33.40; Delaware, 27.72; Rhode Island, 27.37; District of Columbia, 24.40; Alabama, 4.27; Denver, Colorado, 56.57; Dover, New Hampshire, 137.55; Lawrence, Massachusetts, 121.00; Toledo, Ohio, 107.73; Hartford, Connecticut, 65.97; Minneapolis, Minnesota, 63.22; Cincinnati, Ohio, 61.35; Pittsburg, Pennsylvania, 60.50; Elmira, New York, 96.36; Detroit, Michigan, 56.53; Jersey city, New Jersey, 55.03; New Haven, Connecticut, 50.12; Brooklyn, New York, 49.58; Boston, Massachusetts, 49.05; Chicago, Illinois, 48.67; Newark, New Jersey, 48.39; Bridgeport, Connecticut, 47.95; Allegheny, Pennsylvania, 46.23; St. Paul, Minnesota, 42.15; Albany, New York, 41.41; Providence, Rhode Island, 34.12; New York city, 30.83; Indianapolis, Indiana, 30.18; St. Louis, Missouri, 25.86; Troy, New York, 24.43; Burlington, Vermont, 22.90; Trenton, New Jersey, 22.22; Philadelphia, Pennsylvania, 20.35; Kansas city, Missouri, 17.48; Louisville, Kentucky, 17.43; New Orleans, Louisiana, 16.73; Memphis, Tennessee, 14.42; San Francisco, California, 14.00; Baltimore, Maryland, 10.54; Richmond, Virginia, 10.00; Rochester, New York, 9.51; San Antonio, Texas, 6.63; Wilmington, Delaware, 6.37; Concord, New Hampshire, 5.93; Chattanooga, Tennessee, 5.18; Galveston, Texas, 4.32; Mobile, Alabama, 3.86; Atlanta, Georgia, 3.80; Savannah, Georgia, 3.63; Nashville, Tennessee, 2.97; Charleston, South Carolina, 0.44.

As in 1880, therefore, diphtheria is much more prevalent in the northern part of the country than in the south, but its relative prevalence in the cities appears to have greatly increased since the last census, at which time it was slightly more prevalent in the rural districts than in the cities, whereas in 1890 the reverse appears to have been the case.

In the 5-year records of the large cities diphtheria caused 37.57 out of each 1,000 deaths from known causes, the highest proportion being in St. Louis (70.70), and next to this in Chicago (65.12).

In the registration states the average death rate per 1,000 of population, due to diphtheria, was 0.63.

TYPHOID FEVER.

The total number of deaths from enteric (typhoid) fever reported is 27,058, being in proportion of 32.16 per 1,000 of all deaths from reported causes. In the registration states the proportion is 19.90, being 17.02 in the cities and 25.43 in the rural districts. In the nonregistration states, excluding the registration cities, the proportion is 40.85. These are slightly in excess of the proportion shown in the last census.

The following are the proportions of deaths from this disease per 1,000 of all deaths from known causes in some states and cities during the census year:

Alabama, 46.69; Delaware, 34.07; District of Columbia, 33.65; Vermont, 23.59; Connecticut, 23.05; New Jersey, 22.68; New Hampshire, 20.26; Rhode Island, 20.22; Massachusetts, 18.57; New York, 14.02; Allegheny, Pennsylvania, 90.57; Denver, Colorado, 90.52; Danbury, Connecticut, 79.88; Pittsburg, Pennsylvania, 58.57; Camden, New Jersey, 54.15; Omaha, Nebraska, 48.88; Lawrence, Massachusetts, 42.15; St. Paul, Minnesota, 41.26; Chattanooga, Tennessee, 38.86; Minneapolis, Minnesota, 38.59; Nashville, Tennessee, 36.38; Louisville, Kentucky, 34.87; Newark, New Jersey, 34.48; Chicago, Illinois, 34.38; San Antonio, Texas, 33.15; Philadelphia, Pennsylvania, 32.58; Jersey city, New Jersey, 30.10; Atlanta, Georgia, 29.80; Indianapolis, Indiana, 29.16; Cleveland, Ohio, 28.68; Albany, New York, 27.74; Troy, New York, 25.66; Charleston,
